4-in-1

So you want to grow apples in your home edible garden but you don't have room for more than one tree and the guy at the garden center says you need at least 2 varieties to pollinate and get fruit?? Why not try a single tree that combines 4 varieties of apples on the same single tree? All your pollination and space concerns will melt away with the 4-in-1 cold climate apple is created from grafting from an assorted selection of cold climate hardy apples. These are the varieties that are used in the grafting: Braeburn, Cortland, Fuji, Gala, Granny Smith, Gravenstein, Jonagold, Jonathon, Melrose, Red Delicious, Red McIntosh, Spartan, Yellow Delicious, Yellow Transparent, and Winesap. Four of these varieties are grafted on the same plant!! Get ready for a bountiful harvest and outstanding variety all for the price of one....that's a bargain in any economy!

PRUNUS

It's true. Peach selection can be difficult if you are looking to raise them in a home orchard in the far north. Good thing 'Contender' is available to give you a great tasting peach that will shrug off your Zone 4 winters. This late July maturing, freestone peach will thrill you with its big size, its tasty juiciness and its ability to produce loads of these red blushed yellow fruit that are equally good fresh as they are canned or preserved for later use. 'Contender' is self-fruitful, easy to grow and a sure way to make your northern backyard feel like it's a little further south!

A plant with a storied American history, 'Montmorency' is, by far, the most widely grown 'sour cherry' or 'pie cherry' tree in America with nearly 100 years of fruiting history. Vigorous growing, 'Montmorency' is a heavy spring bloomer with clouds of small white, fragrant flowers followed up by a bumper crop of sizable cherries that mature in July and August. Perfect for pies and baked goods, these cherries are also quite good eating fresh especially if left on the tree until almost overripe to attain the highest sugar content possible. Once picked, the fruit doesn't last long but its perfect for preserves and jams. Self-fruitful.

Legendary for its productivity, this European Plum is a vigorous grower and bloomer as it covers itself with a cloud of white bloom in spring. Small plums form and mature in mid-August as a small, blue skinned, yellow fleshed fruit you'll love! Heavy producer. Self-pollinating but best planted with another European Plum. Profuse spring bloom. Fruit is perfect for jams, canning and preserves but is tasty fresh off the tree, too.

PYRUS X

1000612

This Aussie created selection arrived on US shores in 1959 and has been a backyard fruiting favorite ever since. It's easy to see why with its great fruit size, taste and versatility. This big, deep red skinned Pear matures starting in late August and continuing into late September producing a fruit that is very sweet and juicy with a white flesh that delivers a bit of grittiness that adds to the eating experience without being bothersome. 'Red Bartlett' is very productive and very easy to store for later use in baking projects and is one of the ideal Pears for canning. 'Red Bartlett' can be pollinated by any other non-Asian Pear

RUBUS

You'll hardly be able to stand the anticipation while waiting to pick the first ripe berries from this selection of Thornless Blackberry!! When early August rolls around, it will be hard not to keep from salivating just at the thought of these large, jet black, tasty berries. The fruit is only the end product of a plant that is one of the best of its type for the home edible garden. 'Black Satin' is vigorous and pest free making it extremely easy to grow in your garden. The thorn-free stems make picking a friendly, bloodless job that will reward you with oodles of berries on each stem, all of them in danger of never making it into the house since their great taste will have you eating while you pick! 'Black Satin' will love a sunny spot with well-drained soil and will only ask you for enough room to spread so it can offer you its bountiful yield.

Jelly Bean

Everyone is looking for a dwarf Blueberry to use in the landscape but the varieties available invariably disappoint due to poor fruiting or poor growing. Jelly Bean® changes all that in the form of a dense, compact, small leaved plant that produces masses of medium sized, dark blue, incredibly tasty blue berries in July and early August. It is so prolific and such an easy care, easy to grow plant that you won't know where to use it first, grouped to form a fruiting small, formal hedge in any sunny garden or in a container where you can pick right from your back door. Add in spectacular fall foliage color and you have a small Blueberry that will be a big winner in your garden.

1008257

VACCINIUM CORYMBOSUM

A combination planting of 3 different corymosum blueberries. An early, mid and late producer that will ensure a long berry picking season. Provides a "berry" long berry picking season!

VACCINIUM CORYMBOSUM

Adaptable to a wide range of northern climates and soil types, Reka Blueberry produces early-ripening, medium-sized berries with an exceptionally rich flavor and pleasing aroma. Surprisingly high yields and beautiful burgundy red fall color on this 4 -6 ft. bush makes Reka a must-have for every blueberry lover. Developed in New Zealand, Reka is a Northern Highbush variety that grows best in temperate climates where total winter chilling is 1,000 hours or more. Its fruits are excellent for fresh eating and processing. Vigorous and fast growing, Reka Blueberry is also a good choice for local farm markets and u-pick markets.

VITIS

Dependability is without question on this easy to grow vine that will give you gobs of deep purple, sweet Grapes that have the added pleasure of being seedless. There may be no other Grape as multi-purpose for you to grow in your edible garden as it's spectacular for fresh eating when harvest time rolls around in early to mid-September or can be used in jellies and preserves with equal success. Like all heavy, woody vines, be sure to grow this selection with a strong wooded trellis or arbor for support in order to assure the best fruiting and health of the plant.
