FEATURE LEGEND

COMPOSITE TOE

Impact testing determines the amount of protection to the toe under various foot pounds of force. Compression testing determines the amount of static pressure a composite toe cap can withstand. Our boots are I75/C75

ELECTRICAL HAZARD

Footwear is built with nail-free construction to help slow down conduction. Our electrical hazard boots meet and exceed ASTM electrical hazard standards.

GEORGIA WATERPROOF

Air gets in, even though water can't. The Georgia Waterproof system comes equipped with a heavily fortified defense against water, 100% guarantee.

ERGO-FIT SAFETY TOE

The safety toe has been ergonomically designed to match the actual contours of human feet, allowing for better range of motion.

SLIP-RESISTANT

Built with an outsole design and materials that help provide slip-resistance and traction on various surfaces.

SPR LEATHER

SPR™ leather offers protection against and resists caustic alkali, sulfuric acid, calcium hydroxide, potassium phosphate and caustic potash, which means your boots will be "barnyard-proof".

COUNTER HEEL LOCK

Counter lock system wraps around your heel to give a secure fit. Also acts as a kick off when removing your boot.

GODDYEAR WELT

Crafted with Goodyear welt construction for unmatched durability, water resistance, and easy resoling—this timeless technique ensures your shoes are built to last and ready for anything.

ERGO-FIT SAFETY TOE

The safety toe has been ergonomically designed to match the actual contours of human feet, allowing for better range of motion.

ALLOY TOE

Lighter than steel, just as tough. Georgia Boot alloy toe styles meet or exceed ASTM F2413 standards for impact and compression—giving you solid protection without the weight.
